PROJECT SCOPE DOCUMENT

Highly Advanced Corporate Website Integration

1. Purpose and Objective

This document defines the scope of work for the design, development, and deployment of a highly advanced, SEO-friendly, and scalable corporate website. The website is intended for a corporate customer showcasing their brand portfolio (including FMCG products), company history, and investor relations, based on the provided design templates.

The system is architected around the principles of industrial production-level performance, exceptional visual aesthetics, and high scalability. All content, data, and design assets will be provided by the customer. The platform will serve as the digital face of the brand, optimized for search engines and high user engagement.

2. In-Scope Functional Areas

The following functional modules are included within the scope of this engagement based on the provided website template layout. Note: All contents, data, text, and media for these sections will be exclusively provided by the customer.

- Corporate Identity & History: Development of 'Who We Are', 'History', 'Brands', and 'Leadership' sections to highlight the company's legacy and team (Content provided by customer).
- Product Showcase: A dynamic and visually appealing 'Products' module categorizing items (e.g., Snacks, Ice Creams), alongside 'Presence' and 'Innovation' pages (Content provided by customer).
- Corporate Relations: Dedicated areas for 'Investors' and a 'Newsroom' for press releases and media updates (Content provided by customer).
- Engagement: 'Career' portal for job listings and a 'Contact' page with secure inquiry forms (Content provided by customer).
- SEO & Performance Optimization: Implementation of advanced SEO techniques (meta tags, structured data, server-side rendering) and image optimization to ensure lightning-fast load times.
- Content Integration: Strict adherence to the customer-provided design and accurate population of all customer-provided content and data.

3. Out-of-Scope Items

- E-commerce capabilities, shopping carts, or online payment gateways.
- Content creation, copywriting, or graphic design (as these are entirely provided by the customer).
- Complex third-party ERP or CRM backend integrations.
- User forums or interactive community portals.

4. Solution Architecture

The solution follows a modern, decoupled architecture (Jamstack) to ensure high security, maximum scalability, and superior SEO performance.

4.1 Architecture Overview

- End users connect over HTTPS to a highly responsive frontend web application
- Static assets and high-quality images provided by the customer are stored in optimized cloud storage .

5. Roles and Permissions

Role	Content Update	Media Upload	Site Configuration
Administrator	Yes	Yes	Yes
Content Editor	Yes	Yes	No
Viewer (Public)	No	No	No

6. Data Design (Summary)

If a backend database or headless CMS is utilized for dynamic sections (like Newsroom or Careers), it will include the following core entities:

- Products: Product ID, Category, Name, Description, Image URL
- News Items: Article ID, Title, Content, Publish Date, Author
- Job Postings: Job ID, Title, Department, Location, Description, Is Active
- Contact Inquiries: Inquiry ID, Name, Email, Subject, Message, Timestamp

7. Security Requirements

- HTTPS enforced for all traffic and interactions.
- Protection against common web vulnerabilities at the modern framework level.
- Web Application Firewall (WAF) to prevent DDoS attacks and malicious traffic.
- Secure form endpoints for the Contact and Career sections to prevent spam and data leaks.

8. Technology Stack

Layer	Technology
Frontend	Next.js (React) / Tailwind CSS (for scalable, SEO-friendly UI)
Backend / CMS	Node.js APIs
Hosting	To Be Discussed.
Assets Storage	To Be Discussed.

9. Assumptions

- The customer will provide all final content, data, and high-resolution design assets prior to development.
 - The design templates provided are final and do not require conceptual alterations.
 - Timely feedback will be provided by the customer during User Acceptance Testing (UAT).
-

10. Future Enhancement Opportunities

- Integration of an e-commerce module for direct-to-consumer sales.
 - Multi-language support for international markets.
 - Advanced interactive 3D product rendering.
-

11. Rationale / Why This Approach

- SEO & Performance: Server-side rendering (SSR) and Edge caching ensure the fastest load times and best search engine rankings, fulfilling the 'SEO friendly' requirement.
 - Scalability: Industrial production-level hosting can handle traffic spikes without downtime.
 - Fidelity: The technology allows for pixel-perfect implementation of the customer's beautiful design templates.
-

12. Cost Summary

Professional Development and Delivery Cost

₹ 20,000+ GST

Annual Maintenance

- Managed services : ₹ 5,000 + GST

Support Includes –

- Bug Fixes & Issue Resolution
- Technical Support (Phone, Email & Remote Assistance)
- Software Updates & Minor Enhancements
- Performance Monitoring & Optimization
- User Account & Access Support
- Error Troubleshooting & Log Analysis
- System Health Check (Quarterly)
- Minor UI Improvements (Non-major changes)
- Database Maintenance & Optimization
- Support for Installation/Reinstallation (Same Server)
- Post Production Support – Complimentary 2 Months from Production Deployment.
- The AMC (Annual Maintenance Contract) is strictly for maintenance purposes only. Any modifications, structural changes, or addition of new content are not included in the AMC.

Terms and Conditions

- Extra taxes (GST) as applicable.
- Payment terms: 75% advance, 25% on completion of integration & UAT
- Payments due within 15 days of invoice submission.
- Travel costs outside Kolkata, if any, are chargeable as actual.
- AMC/managed services start post 2 months of successful handover
- Customer to provide a valid, accessible Web Application API, SQL Server environment, and a working Tally Prime installation with Tally XML Interface enabled.
- Customer to provide all required project prerequisites, access credentials, and information in a timely manner.
- Two months of complimentary handholding support post go-live; any work beyond this scope will be chargeable separately.

- Stable network connectivity between the application server, SQL Server, and Tally Prime is strongly recommended.
- Any additional Tally master setup, customization, or report development beyond the agreed scope will be quoted separately.
